

**David Antle** PhD, CCPE  
**Research Director/Sr. Ergonomist**

David received his PhD from McGill in 2013, specializing in occupational biomechanics and ergonomics. In addition, he completed his Masters of Science in Kinesiology at Memorial University of Newfoundland in St. John's in 2008, specializing in Ergonomics and Biomechanics. Currently, David works as a senior ergonomist and takes an active role in ongoing applied research projects by serving as EWI Works' Research Director. He also holds Canadian Certified Professional Ergonomist (CCPE) designation from the Canadian College for the Certification of Professional Ergonomists.

David has gathered extensive experience in the field – with a repertoire including: research and development of tools and programs to reduce musculoskeletal disorders, development of simulator and training technologies, and development of education and training programs to improve worker safety and performance. In addition to work at EWI Works, David is also an Associate Researcher for the SafetyNet Center for Occupational Health and Safety Research at Memorial University, and an alumni member of the Occupational Biomechanics and Ergonomics Laboratory at McGill University.

Over and above his academic pursuits and work experience, David has also been invited to both speak and chair for health and wellness groups at McGill, for the Association of Canadian Ergonomists and the International Conference for the Prevention of Musculoskeletal Disorders. David has also published numerous ergonomics research articles, and a 'participatory ergonomics' guide book and training package. David's continued work focuses matching scientific evidence and research on best-practices with our consulting and applied research projects.
