

Stay informed! A series of current topics on workplace issues

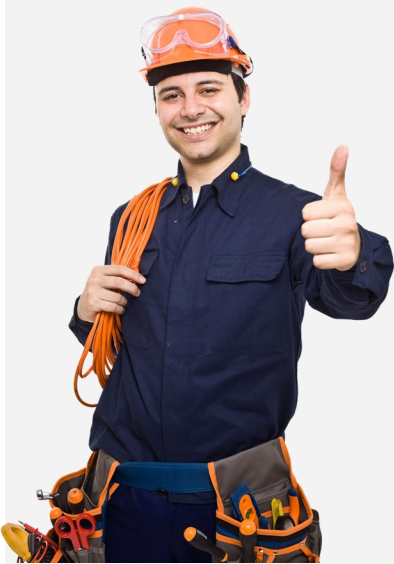

Evaluating the true impact that sprain/strain & musculoskeletal disorders have on construction & trades workers

A review of available evidence outlining the true prevalence of sprain/strain injuries and/or musculoskeletal disorders (MSD) among employees in trades or construction work - includes a discussion on how these injuries impact employee health & wellness AND the profitability of an organization!

Learning Objectives:

- Learn the rates of sprain/strain injuries and MSDs in trades and construction work.
- Identify the physical demands commonly associated with these injuries among various trades.
- Understand the impact these injuries have on health & wellness of employees as well as the true economic costs of these injuries & issues.
- Evaluate the economic gains from targeted sprain/strain & MSD prevention & hazard reduction programs.
